PROJECTS

NBA Guard Your Card:
• Using Ruby on Rails, a user can draft 5 NBA player cards.

• Cards selected are then generated as instances of those selections. The user can then select new players every game.

• Using jQuery and Javascript, users then drag and drop cards in the game view.

• As defined in Games Controller, user will match up against 5 randomly selected cpu cards.

• Using jquery Draggable/Droppable, users play 1 card against cpu.

On the House:
• Generated Ruby on Rails application that promotes upcoming events in NYC.

• Users can post many events and post many comments. Comments belong to an event, so each event can have many comments.
